EAST AKRON, OHIO

# **READ THIS BEFORE ORDERING**

## **SIZE OF ORDERS**

TERMS: Cash or 25% down, balance before delivery or C. O. D. Five bulbs or bulblets may be purchased at the ten rate or twenty-five at the hundred rate. We do not split quantities as listed, for example, if we list a variety 2-.15 or 4-.15, do not attempt to order one at a lower price. We can accept no single item for less than ten cents. Orders over one dollar prepaid.

Make money orders or checks payable to J. J. Braucher.

Our bulbs are healthy and free from thrip. Our gardens have been duly inspected by the Department of Agriculture (State permit No. 8). We try to send out bulbs that will give full satisfaction and try to make our extras something of real merit. We use every precaution to keep our bulbs free from disease and true to name. If any error should occur in labeling or any stock occur to be untrue to name we will replace same. We do not substitute varieties unless requested.

## **SIZE OF BULBS**

*Large*, 1¼ inch and over; *Medium*, ¾ to 1¼ inch; *Small*, ½ to ¾ inch.

## **ORDER EARLY**

Bulbs should be ordered early. Nothing is to be gained by waiting. Often you may lose out on the variety you want most, merely by waiting too long. Very often the newer and better varieties are sold out very early in the season. We always fill orders in rotation as received. If any variety drops in price after our list is mailed we will make up your loss in extra bulbs.

No bulblets will be mailed after April 15. We cannot guarantee bulblets to germinate.

Shipment will be made as soon as danger of frost is past.

*All stock subject to prior sale.*

# BLOOMS FOR EXHIBITION

If you desire to grow large blooms for exhibition purposes -- we recommend that you buy large bulbs.

If in your order you will state that you want bulbs for exhibition, we will take added pains to choose the largest bulbs we have in stock. We will do this at absolutely no extra cost to you. These bulbs will not make as many bulblets as the smaller bulbs do, but will give a stronger stalk, longer spike, and larger florets.

**How to plant and grow good Glads:** First the bulbs you use to plant must be stored right. In the fall after bulbs are cured and cleaned, put them in a fairly warm place, about 60 degrees, for four weeks, sprinkle naphthalene flakes over them, about 1 ounce to every 100 bulbs, cover with paper to confine the fumes. Then in about a month shake off the naphthalene and store at about 40 degrees.

Just before planting bulbs, soak in a solution of corrosive sublimate using 1 ounce to 8 gallons of water to kill any thrip that may be on the bulbs, also to help maintain the bulbs in a healthy condition, and destroy any disease organisms, such as scab, etc.

**Distance and depth:** As a rule more plant Glads in rows like vegetables, than are planted in beds, but if you wish to plant in beds, plant about 6 inches apart and 4 to 5 inches deep. When planting in rows, you may make them in most any width, all depending on the space you have, from 18 to 36 inches is practical.

To plant in furrows or trenches, large bulbs 3 to 4 per ft., medium bulbs, 4 to 6 per ft., small bulbs as many as 8 to 10 per ft., plant large bulbs 4 to 5 inches deep and smaller bulbs more shallow.

**How to label:** We use a wire stake, 2 ft. long, to the looped end is fastened a Tree label, painted white on one side. You can write on the painted side and it will not wash off in one season. These labels are inexpensive, so do not take any chances on faulty labeling.

**Cultivating and fertilizing:** The main object of cultivation is to kill weeds and form a mulch that will keep the soil from getting hard and cracking open. Cultivate often, and kill the weeds while still small. If your soil is very good you will not need to fertilize very much, but if extra large flowers are wanted they will require added plant food and ample water at blooming time.

You may mix with your soil, sheep or cattle manure, which you can procure dry in 100 lb. bags. Bone meal is also good.

We use ordinary potato fertilizer to produce good strong bulbs, but do not try to force for large blooms.

**Cutting for blooms:** As a rule cut when first bloom opens, let four to six leaves remain on the plant to help ripen the bulbs.

## BULBLETS

Buying of bulblets is frequently an economical way of getting started with high priced novelties but these do not always germinate and no guarantee can be made that customers will meet with success in growing these. Germination is usually aided by cracking the hard shell and removing a small section of it before planting. In the case of difficult germinators, soaking in damp cloth or peat moss for a week or two before planting materially improves germination. Some varieties make large bulblets and others produce only small ones. I aim to send out bulblets of selected size, particularly in novelties if at all possible. With occasional varieties, the smaller size bulblets germinate much better and in such cases unless otherwise instructed, I endeavor to use my best judgment in sending what I think will give best results.
